| Decision | Idea to start with | Our final answer |
|---|---|---|
| Web, mobile or both | One mobile friendly web app for residents, shopkeepers and responders, and a desktop dashboard for officials | Both Interfaces need to be support |
| User types | Resident, shopkeeper, support service responder, government official | High level user – Shopkeeper<br>Low level user – Resident<br>Admin – Support service |
| How we show a report can be trusted | Every report is unverified until an official checks it, then it becomes confirmed | Nearest police station member will inform about the current location and he need to take a picture of the damaged place and need to post it the user case report and support service will approve the case<br>+ Additionally add protocols for evidences ( adding rules for videos and pictures – completely avoid other user inputs ) |
| First version features | Signup, injury report, vandalism report, duplicate flag, official dashboard, responder case list with Case Resolved | Signup – Sign in procedure – ( normal procedure will follow ) take the necessary documents – while user is sign to the system ( National ID , Passport, Business registration , Utility bills Paid in last 06 months , additionally insurance certificates/documents )<br>As well in Sing – in process user need to upload short 10 sec live video footage ( in mobile app /web) while holding his/her NIC/passport ( need to be clearly visualize ) |

| Decision | Idea to start with | Our final answer |
|---|---|---|
| Exception for each journey | Journey 1: account not approved yet<br>Journey 2: location unknown or location access off<br>Journey 3: no photo or cost not known<br>Journey 4: two officials updating the same case | Notify user via email or SMS about the un-valid input validations ; missing inputs ; not matching for input sizes warn at the input boxed – maximum file length is : X and limits are exceeded<br>( Can apply this procedure for Journey 1 to 4 )<br>If two user update the same scenario – clearly check with<br>user's documents collected in the Sign-in process and the user selfie/10 sec short video with passport/NIC and will clarify who's the real user in that situation ( Selfie video takes time to sign-in to the system – and still in under the rejected : attribute means need to finalized it as accept or reject ) |
| Sample case | One made up case with the same ID, street and time in every journey | If we got duplicates from one user clearly check latest incident + in which clearly gives accurate inputs – if both succeed that case approve<br>Two users com-up with same scenario then clearly verify who is actual user |
| GitHub setup | Branch names yourname-task, folders docs / wireframes / notes, Nadev merges into main | Git-hub process started – to use as an evidence – for each member contribution and version controlling |
| Tools | Excali-draw for drawings and one shared folder | After the client requirements finalized – Stake holder will contact tomorrow client and need to verify the clients exceptations ; After that User flow + Finalized Requirements + Functional & Non-Functional requirements will enter to Excali-Draw space |
| Check in times | Wednesday and Thursday night, longer review on Friday | Check it : After tomorrow meeting with the client ( conducted by Stake Holders ) Arrange a meeting to discuss next steps |
| Who submits | Nadev | ----------Not decided------- |
