# Journey 1 – User Signup and Access

## 1. User and goal

Lea is a store owner on Rue des Lilas, Paris. Her shop window has been damaged, and she wants to create an account so she can report the damage to her shop and track it.

## 2. Starting point

Lea opens the application on her mobile phone for the first time. She is directed to the authentication page, where she can either sign up or sign in.

## 3. Main flow in order

- **Step 1 –** Lea opens the application and selects Sign up.
- **Step 2 –** She enters her email address and creates a strong password using letters, numbers and special characters.
- **Step 3 –** She selects Shopkeeper as her user type.
- **Step 4 –** She enters her name, contact number, address, NIC number and business registration number.
- **Step 5 –** She uploads her NIC or passport, business registration document and a utility bill from the last six months. Insurance documents can also be uploaded if available.
- **Step 6 –** She records a 10-second live video while holding her NIC or passport to verify her identity.
- **Step 7 –** She checks the information and submits her registration.
- **Step 8 –** Her account is created with a Pending status until her details are verified. During this period, she has guest-level access and can still contact customer service in an emergency. (Pending guest-access arrangement to be agreed by the team.)
- **Step 9 –** Government IT desk staff review her documents and identity verification before approving her account.
- **Step 10 –** Once approved, she receives an email or SMS notification.
- **Step 11 –** Lea signs in using her email and password.
- **Step 12 –** She is directed to the User Dashboard, where she can report the damage to her shop and track her reports.

## 4. Exception and how the user continues

If Lea uploads a blurry or invalid identity document, her account verification may be rejected.

She receives an email or SMS explaining the reason. She can open her profile, upload a clearer document and submit it again.

Her account returns to Pending until government IT desk staff review and approve it.

## 5. End result

Lea successfully creates and verifies her shopkeeper account. She can now access her User Dashboard, submit incident reports and check the status of her reports.

## 6. Screens to sketch

A. Authentication page – Sign up and Sign in.
B. Signup form – Email, password and personal details, including NIC number.
C. User type selection – Resident, Shopkeeper or Staff registration (subject to approval).
D. Document upload – Identity and business verification.
E. Live video verification – Record a 10-second video.
F. Account pending – Guest-level access, waiting for approval and emergency customer service contact.
G. Account rejected – Reason and option to re-upload documents.
H. User Dashboard – Profile, account status and Report button.
